Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 August 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. The drawings filed 8/22/03 are acceptable to the examiner.

Information Disclosure Statement

3. The information disclosure statement filed 8/22/03 has been considered.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by applicants admitted prior art (figures 5A, 5B and corresponding disclosure).

Re claim 1: Applicants admitted prior art teaches all the structure related to the claimed invention, i.e. a medium (10), a hub (12) a hub adaptor (14) and a rotary shaft which as depicted in figure 5B is directly attached to a motor (16). Pages 1-3 of applicants' disclosure discuss a method in which the arrangement is placed together to position the medium. Clearly each member when attached to the corresponding member has some eccentricity there between, i.e. the eccentricity between the disk medium and the hub,

Art Unit: 2627

the eccentricity between the hub and the hub adaptor and the eccentricity between the hub adaptor and the rotary shaft.

Allowable Subject Matter

6. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The claimed method as set forth in claim 2/1 that determines the directions of eccentricity of the disk-shaped medium, the hub and the hub unit by rotating the hub adaptor, without fixing the hub to the hub adaptor, in a prescribed angle with respect to the rotary shaft is neither taught by nor an obvious variation of the art of record. The limitations of claims 3-6 depend on the limitations of claim 2.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Suzuki et al. uses a counter weight to mitigate eccentricity. Pfeiffer et al. uses adjustable rings to balance a spindle assembly. Yoo et al. teaches the use of sensors to position a disk with respect to a spindle. Shiraishi et al. uses a plurality of actuators to position a disk on a spindle.
